## SUSTAINABILITY

*In Alaska*, PROTECTING THE FUTURE of both the wild Alaska pollock stocks used in surimi seafood and the environment takes priority over opportunities for commercial harvest. Populations of wild Alaska pollock in the Bering Sea, Aleutian Islands, and Gulf of Alaska are estimated separately using annual scientific research surveys. Managers use survey data to determine the "TOTAL AVAILABLE" population, identify the "ALLOWABLE CATCH" and set a lower "ACTUAL CATCH" limit to ensure that the wild population in Alaska's waters will always be sustainable.

The Alaska pollock fishery is the **LARGEST SUSTAINABLE FISHERY** in the United States.

## CERTIFIED

The Alaska pollock fishery is certified under two independent certification standards for sustainable fisheries:

- ALASKA RESPONSIBLE FISHERIES MANAGEMENT (RFM)
- MARINE STEWARDSHIP COUNCIL (MSC)
